

The Academic Support System of SMP Mutu

During my time at SMP Muhammadiyah 7 (SMP Mutu), I observed how the school emphasizes learning through both academic lessons and real-life applications. The students demonstrated discipline and understood how to follow rules and complete tasks assigned by their teachers. What impressed me the most was how the school truly embodied its mission, reflected not only in its words but also in the behaviors of the students.

SMP Muhammadiyah 7 learning resources are...

Like any other schools, SMP Mutu also focuses on the ICT integration. On our meeting with the principal, Ms. Arum, she told us that the school uses traditional and modern way of teaching where some of the teachers utilized the use of blackboard especially during math class, while some classes like Science utilizes PowerPoint presentations, and audio / visual

for a more fun and engaging learning. On the other hand, the English class teacher utilizes printed media (Textbooks) and digital resources (E-books, Educational websites, and YouTube). In addition, all students portfolio or learning are kept and posted through blog where their learning in the ICT classes where integrated.

How does the learning resources helps students to learn?

The learning resources at SMP Mutu support students by offering a balanced and flexible approach. Traditional tools like blackboards and textbooks ensure foundational teaching in subjects such as Math and English, while modern resources like PowerPoint presentations, educational websites, and e-books make learning more interactive and engaging. This variety caters to different learning styles and maintains student interest.

Additionally, class blogs where students upload their portfolios help develop digital skills and promote ownership of their work. Overall, this mix of resources makes lessons more effective, enjoyable, and relevant to real life.
